EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or
additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR
 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the
payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Rajiv S. Shah on 1/15/2010.

The application has been amended as follows:

Claims 15-24 and 30 have been canceled.

Instant claim 1 has been replaced with the following:

A method for producing recycled pulp which comprises: generating bubbles by cavitation using a fluid jet and bringing said bubbles into contact with a pulp suspension to strip contaminants deposited on pulp fibers and inorganic particles during the process of recycling waste paper wherein a pressure of jetting liquid (upstream pressure) is 3 MPa or more, said pressure being a gauge pressure.

Instant claim 2 has been replaced with the following:

The method for producing recycled pulp of claim 1 characterized in that said bubbles generated by cavitation using the liquid jet are on the order of 1 μ m to 1 mm.

Instant claim 3 has been replaced with the following:

The method for producing recycled pulp of claim 1 characterized in that the pulp suspension and bubbles are contacted by emitting the pulp suspension as the liquid jet.

Application/Control Number: 10/566,262

Art Unit: 1791

Instant claim 7 has been replaced with the following:

The method for producing recycled pulp of claim I wherein cavitation is generated by emitting a jetting liquid via a nozzle or an orifice tube and the pressure of the jetting liquid (upstream pressure) is 3 MPa or more and 30 MPa or less, said pressure being gauge pressures.

Instant claim 11 has been replaced with the following:

A method for modifying pulp fiber surfaces and dirts or stripping dirts deposited on pulp fiber surfaces without damaging pulp fibers by means of the collapse pressure of bubbles of cavitation generated using a liquid jet by emitting a pressurized jetting liquid to a material comprising pulp fibers in a vessel, wherein said pressurized jetting liquid is emitted at a pressure (upstream pressure) of 3 MPa or more, said pressure being a gauge pressure.

Instant claim 13 has been replaced with the following:

The method of claim 11 characterized in that the jetting liquid for generating cavitation is emitted via a nozzle into a vessel having a material comprising pulp fibers and the pressure of the jetting liquid (nozzle upstream pressure) is 3 MPa or more and 30 MPa or less and the pressure in the vessel in which pulp cellulose is treated (nozzle downstream pressure) is 0.05 MPa or more and 0.3 MPa or less, and the ratio of the pressure in the vessel to the pressure of the jetting liquid is 0.001 - 0.5, said pressures being gauge pressures.

In Instant claim 27, line 2, the word 'a' between the words 'which' and 'jetting' has been replaced with the word 'the'.

Claims 1-5, 7-8, 11-14, and 25-29 are allowed.

The following is an examiner's statement of reasons for allowance:

The examiner found that cavitation using ultra-sonics was known in the art for deinking recycled pulp to remove ink and other containments from the fiber surfaces. In contrast the instant invention cavitation was caused by a large pressure drop of a jetting liquid into a pulp

Application/Control Number: 10/566,262

Art Unit: 1791

suspension, the jetting liquid could either be water or the pulp suspension itself. While there have been some jetting cavitation treatments of pulp such as by SOLONITSYN (SU 1659556) there have been no cavitation treatments wherein the jetting liquid was 3 MPa or higher for the treatment of pulp deinking. The range given by SOLONITSYN '556 was a maximum of 190 meters of water column (1.85 MPa). While some optimization of pressure could be obvious, an optimization as high as 3 MPa would be unobvious since the 190 meters of water column (1.85 MPa) was given as the highest range and the other SOLONITSYN references only disclosed as high as 120 meters of water column (1.17 MPa).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

SU 1659556 A2 discloses a maximum pressure of 190 meters of water column or 1.85 MPa [column 2 line 14].
